

eXact learning LCMS

eXact learning LCMS is the industry reference, Learning Content Management System that responds to today's varying business pressures, supporting instantaneous, company-wide collaboration for the creation of critical learning content. eXact learning LCMS maximizes your existing content investments, while supporting learning content strategies that improve your key business processes. eXact learning LCMS allows for rapid content development through a Web-based Online Editor allowing a seamless collaboration of subject matter experts and course designers, regardless of their location and specialization. This provides cost-effective, repeatable and consistent content production projects. Furthermore, being based on XML technology, our system is designed for the extensive reusability of content chunks at any granularity level, and offers full compliance with industry standards (SCORM 1.2, SCORM 2004, xAPI).

Service Oriented Architecture (SOA) Web services | LMS/LRS integrations | 3rd party systems integrations | Plug-ins

FEATURES

CONTENT AUTHORING

- Ingestion in Digital Repository - reuse all your existing learning content materials in any format, including Microsoft Office.
- Interactions library, extensible through SDK, for enriching, tracking and reporting learning and testing experiences.
- Collaborative, template-based Online Editor for rapid and consistent content development for varied and dispersed teams of authors
- Business-driven & process-driven content categorization (meta-data, taxonomies, vocabularies and content tags) enables authors and reviewers to search for, and find, the right material quickly.
- Its XML-based content models - for the rapid production of high quality and engaging materials in responsive HTML/HTML5 formats - can be exported in PDF, ePub and MS Office versions.

CONTENT MANAGEMENT

- Contents' version history and check-in/out features to ensure rapid versions comparison and control on materials updates.

- Configurable workflows for matching your organization's business processes with your learning content processes.
- Dynamic Learning Object linking allows authors to reuse and dynamically propagate content updates for shorter production and maintenance cycles
- XLIFF-based localization engine to create, manage and delivery of multilanguage content according to cultural variations.
- Project Management Module to define tasks and deadlines, to ensure the right person works on the right content, in the correct phase of the project.

CONTENT DELIVERY

- Standard Interoperability based on SCORM, xAPI standards for future-proof integration with any LMS, LRS or business system
- Open architecture (SOA) and Web Services exposition for functional extension and investment rotection
- Multi-channels, multi-formats, multi-devices learning content delivery - personalized content delivery, based on learner preferences

BENEFITS

A shared Web-based Authoring tool for improved quality and faster time-to-market editorial process

Subject matter experts as well as novice users that have little familiarity with learning authoring tools work collaboratively with instructional designers, expert users and the rest of the organization on the same Web-based authoring tool, templates, workflow, review processes, and projects. This feature is what allows for the benefit of rapid content authoring.

Cost savings, rapid response

Your organization can rapidly develop and deploy content with a short shelf-life, to be used on a just-in-time basis, on any platform including mobile devices.

You can now afford a truly blended learning approach

Ingest, index, store, reuse and dynamically update source content and materials, creating derivative versions of content, applicable to different audiences and outputs (e.g. web training, instructor-led-training, mobile delivery, hardcopy), and avoiding costly duplications.

Extensible content models

Fully XML-based technology, encompassing the full spectrum of authoring needs and extensible to include new custom templates and interactions, allows the creation and reuse of granular Learning Objects according to your unique pedagogical approach.

Quality, consistency, error reduction and zero re-work

Improve the quality of learning content by ensuring availability and access to the up-to-date versions of material. Every author uses the same platform for consistent quality and faster time-to-market. Workflow management, roles, project and task definitions, and collaborative working models make it easy to manage the content production and review process. Delivery where and when needed Increase your organization's performance by providing employees with personalized learning programs through a variety of delivery channels, including online/offline, desktop/tablet/-smartphone/ePub reader/hardcopy delivery to meet any learning need.

eXact learning solutions, is a leading software development company in the field of eLearning technology solutions. Its suite of applications includes:

- a learning content management system (eXact learning LCMS) which supports the online creation, management and delivery of digital contents and related services
- a client authoring tool to create, index, organize and package learning objects and courses (eXact learning Packager)
- tools to manage, deliver issue and track content for mobile devices (eXact learning Mobile)

All these tools are free-standing, scalable and can be integrated with both proprietary software and Open Source platforms.

eXact learning solutions is a sister company of Lattanzio Group.
